1	What is FPDF? FPDF is a PHP class which allows to generate PDF files with pure PHP, that is to say without using the PDFlib library. F from FPDF stands for Free: you may use it for any kind of usage and modify it to suit your needs. FPDF has other advantages: high level functions. Here is a list of its main features: - â€¢Choice of measure unit, page format and margins - â€¢Page header and footer management - â€¢Automatic page break - â€¢Automatic line break and text justification - â€¢Image support (JPEG, PNG and GIF) - â€¢Colors - â€¢Links - â€¢TrueType, Type1 and encoding support - â€¢Page compression FPDF requires no extension (except zlib to activate compression and GD for GIF support). It works with PHP 4 and PHP 5 (the latest version requires at least PHP 4.3.10). The tutorials will give you a quick start. The complete online documentation is here and download area is there. It is strongly advised to read the FAQ which lists the most common questions and issues. A script section is available and provides some useful extensions (such as bookmarks, rotations, tables, barcodes...).	£20.00	£20.00

2	US presidential contender Donald Trump's opening monologue on TV comedy show Saturday Night Live was disrupted by a heckler shouting "Racist!". But the interruption was from comedian Larry David - joking that he wanted to claim the reward offered by a Latino rights group angry at Mr Trump's statements on Mexican immigrants.	£44.00	£44.00
